

LEED v3 Regional Material (MR)

MRC5 Regional Material for ASC Steel Deck

LEED v3 Material Resources Credit 5 requires that project specifiers use building materials or products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site.

In relation to steel products, the term 'extracted or recovered' refers to the extraction of iron ore or the melting of recycling materials. Iron ore is mined around the globe and blended to produce specific grades of steel. Currently, there is not a formal process to track the origin of iron ore transported and traded on global commodity markets. Furthermore, there are currently no mining operations or steel recycling operations west of St Louis, Missouri, that can fulfill the extracted, harvested, or recovered, component of this credit.

The processing of material occurs in:

- Steelscape
222 W. Kalama River Road
Kalama, WA 98625

The manufacturing process for ASC Steel Deck floor and roof deck products occurs in:

- ASC Steel Deck
220 West Kalama River Road
Kalama, Washington, 98625

Should you have any additional questions regarding the manufacturing processes employed by ASC Steel Deck, please contact your ASC Steel Deck Sales Representative for assistance.
