

LEED v4.1 Indoor Environmental Quality (EQ) EQc2 Low-Emitting Materials

Applicable Credits (1-3 points):

ASC Steel Deck products are made using hot dipped galvanized steel which is an inherently non-emitting source. Moreover, an optional factory-applied primer is offered on ASC Steel Deck products used in an exposed ceiling or acoustical application. The primer is factory-applied and cured resulting in the final product being an inherently non-emitting source. Sealants are not required on the final products.

No VOC emissions testing is necessary to demonstrate compliance with this credit.

Notable References:

EQc2.1 Option 1. Product Category Calculations: ASC Steel Deck products used in an exposed ceiling or acoustical application are categorized under "Ceilings, walls, thermal and acoustic insulation," and comply as an inherently non-emitting source.
